Upute za strane radnike koji obavljaju pregled za produljenje dozvole boravka

Instructions for foreign workers undergoing a medical examination for the renewal of a residence permit

Pregled na koji ste upućeni sastoji se od fizikalnog pregleda i uzimanja anamneze, prikupljanja podataka o dosadašnjim cijepljenjima, bakteriološkog pregleda stolice, pregleda krvi na krvlju prenosive bolesti i RTG pregleda prsnog koša,

Na temelju ovih pretraga i pregleda moguće su dodatne pretrage.

Ovdje, u ambulanti, nakon fizikalnog pregleda i anamneze, idete u prizemlje predati uzorak stolice i izvaditi krv (osim ako ste nedavno radili te pretrage i imate nalaze).

Nakon davanja krvi i uzorka stolice, trebate otići uraditi RTG prsnog koša (pluća) prema uputama liječnika koji Vas je pregledao (osim ako imate od ranije nalaz RTG pretrage prsnog koša, koji nije stariji od 12 mjeseci).

Odmah ćemo Vam izdati potvrdu da ste pristupili pregledu, koju možete pokazati poslodavcu.

Kada prikupite nalaze pregleda stolice, krvnih pretraga i RTG snimke, vraćate s nalazima te ćete ovisno o nalazima završiti pregled ili ćete biti upućeni na dodatne pretrage. Potrebno je najčešće tri do četiri radna dana da Vam se izdaju svi nalazi. Također ćemo dogovoriti i plan nadoknadnog cijepljenja, ako je potrebno. U tom trenutku dobit ćete uvjerenje o obavljenom pregledu, koje trebate priložiti uz zahtjev za produljenjem privremenog boraka. Istovremeno ćemo Vam izdati i Svjedodžbu o obavljenom pregledu i s upisanim nalazima pretraga te, po potrebi s preporukom o nastavku medicinske obrade.

The examination you have been referred for consists of a physical examination and medical history review, collection of data on past vaccinations, a bacteriological stool test, blood tests for blood-borne diseases, and a chest X-ray.

Based on these tests and examinations, additional testing may be required.

Here at the clinic, following the physical examination and medical history review, you will proceed to the ground floor to submit a stool sample and have blood drawn (unless you have recently undergone those tests and have the results).

After providing blood and stool samples, you need to go for a chest X-ray as instructed by the examining physician (unless you already have a chest X-ray report that is less than 12 months old).

We will immediately issue a confirmation that you have undergone the examination, which you can present to your employer.

Once you have collected the results of the stool test, blood tests, and X-ray, you will return with them; depending on the findings, the examination process will either conclude, or you will be referred for further testing. It usually takes three to four working days for all your test results to be issued.

We will also arrange a catch-up vaccination plan, if necessary.

At that stage, you will receive a certificate of examination completion, which must be submitted with your application for the extension of temporary residence. At the same time, we will issue a formal report detailing the examination and test results, including recommendations for further medical follow-up if required.
